REACH 100

Here is a grid of four "boxes":

You must choose four different digits from 1–9 and put one in each box. For example:

5	2
1	9

This gives four different 2-digit numbers reading left to right and top to bottom: 52, 19, 51 and 29.

When you add these numbers together, their sum is 151.

Your challenge is to find four <u>different</u> digits to put in the boxes that give you four 2-digit numbers that add to <u>100.</u>
